

INFORMATION ON CHIROPRACTIC

What is Chiropractic?

Chiropractic is a health profession specializing in the diagnosis, treatment and prevention of mechanical disorders of the musculoskeletal system and the effects of these disorders on the functioning of the nervous system and general health.

Conditions that Chiropractors treat:

Neck pain, Whiplash, Lower back pain, Headaches and migraines, Sciatica, Scoliosis, Spinal disc injuries, Tendinitis, Pregnancy-related pain, Arthritis, Sprains, Joint pain

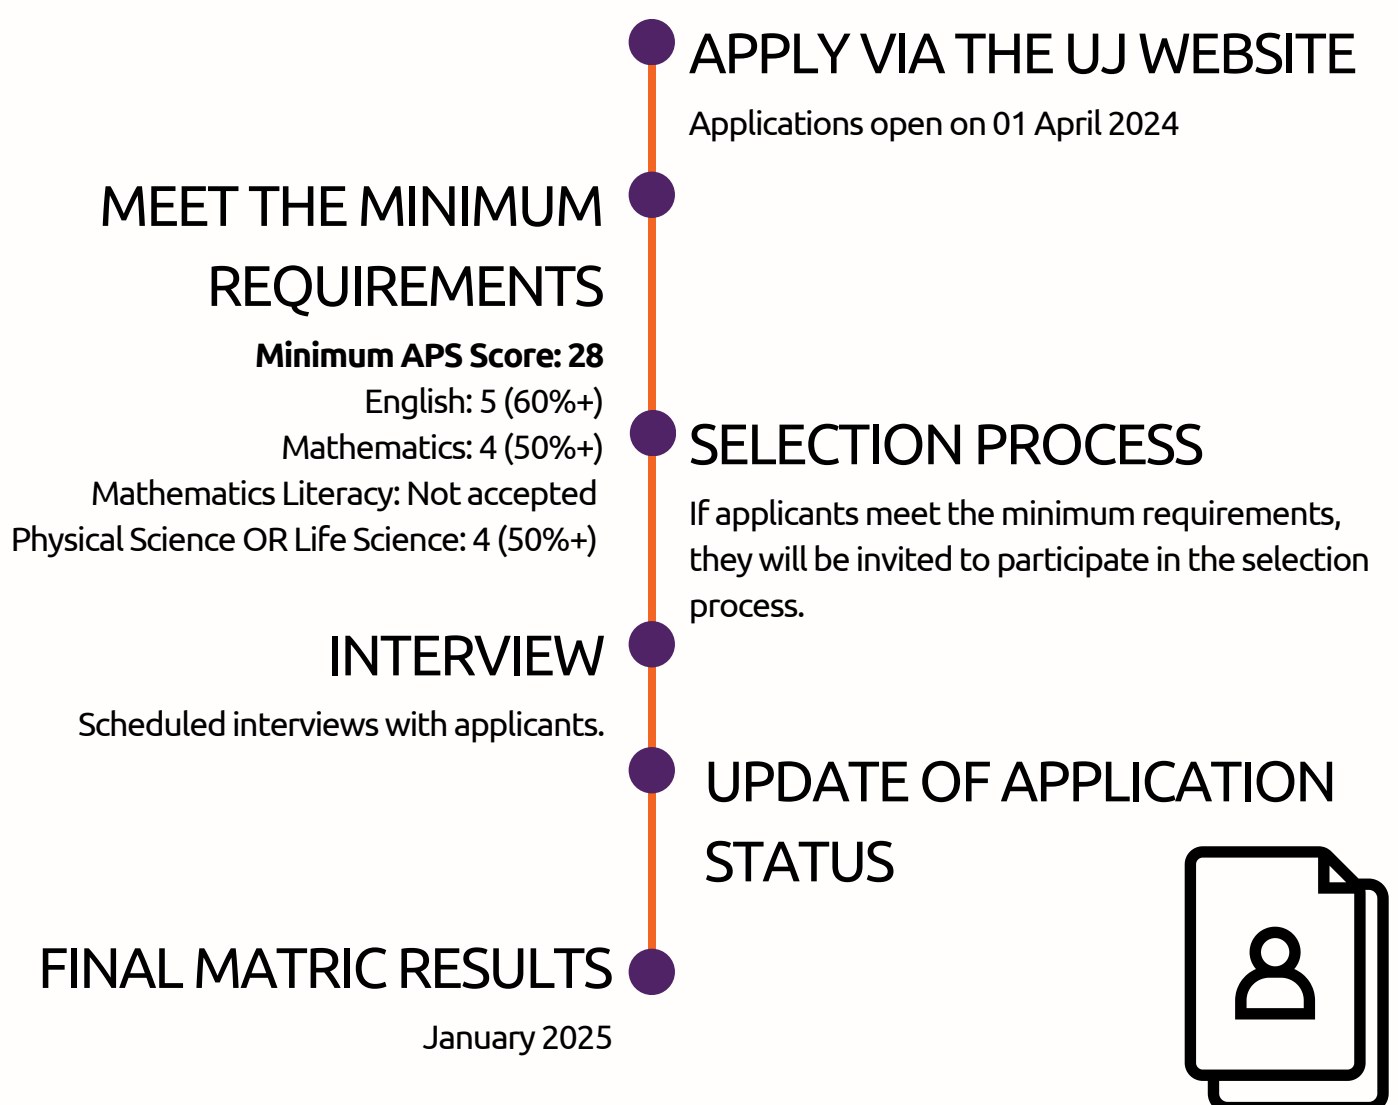

Who can Chiropractors treat?

Chiropractors can treat people of all age groups such as babies, children, adults and geriatric patients.

What do Chiropractors do?

Chiropractors rely on non-invasive treatment methods. Chiropractors work with the spine and joints and focus on creating optimal alignment through careful manipulation to bring about pain relief for patients suffering from numerous conditions. Chiropractors are trained to diagnose, treat, manage, and prevent disorders of the musculoskeletal system (bones, joints, and muscles), as well as the effects these disorders can have on the nervous system and general health.
